

## Avenda Windows Universal System Health Agent (USHA)

### Overview

The Avenda Windows USHA enhances the coverage of NAP end point health inspection in Windows Vista and XP Service Pack 3. The USHA provides for extensive, supplemental system health checking in conjunction with the most popular anti-virus, anti-spyware and personal firewall products in use today. In addition, the Avenda USHA can check the status of system services and existence of specified registry keys, and can be configured to auto-remediate a quarantined host.

### Seamless Operation in the NAP Environment

- ✓ Avenda Universal System Health Agent (USHA), installable on Windows Vista and Microsoft Windows XP SP3 as an add-on to the Microsoft NAP client.
- ✓ Avenda Universal System Health Validator (USHV), installable as an add-on to Microsoft Network Policy Server (NPS).

### Comprehensive Health Checks

- ✓ Firewall Status – Verify firewall status with auto-remediation.
- ✓ Service Status – Check for different services running on the system and auto-remediate by starting or stopping services.
- ✓ Anti-Virus Status – Ensure anti-virus software is up-to-date and auto-remediate by triggering updates.
- ✓ Anti-Spyware Status – Ensure anti-spyware software is up-to-date and auto-remediate by triggering updates.
- ✓ Registry Checks – Scan for specified registry keys and auto-remediate by creating, deleting or modifying specified keys.

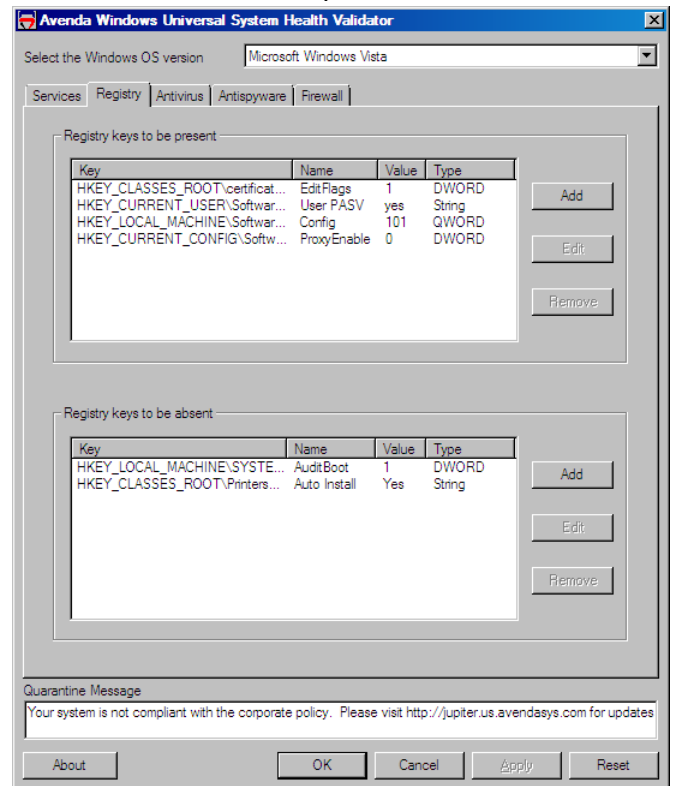

For current list of supported anti-virus, anti-spyware and personal firewall products, send email to [asknap@avendasys.com](mailto:asknap@avendasys.com).

### Supported Platforms

- ✓ Microsoft Windows Vista (all versions)
- ✓ Microsoft Windows XP Service Pack 3 and above
