

Five Principles of Integrated Network Security

Joel M Snyder

Senior Partner

Opus One

jms@opus1.com

A Network

Is

A Tool That Lets

Someone $\xrightarrow[\text{To}]{\text{Get}}$ Something

Network Security

Is

Controlling

Someone $\xrightarrow[\text{To}]{\text{Get}}$ Something

Have
Multiple
Managed
Control
Points

Authenticate
All Users At
Point Of
Entry To The
Network

Partition The
Network Into
As Many
Zones As
Make Sense
(but not more)

Push
Protection
Deep
Into The
Network

Have
Checks &
Balances
on
Security
